

Rhino Visual Tips 4.0

Before you start.

Learn how to utilize the features of Rhino's interface.

Learn how toolbars access shortcuts to commands and options. You can float a toolbar anywhere on the screen, or dock it at the edge of the graphics area.

Key things to remember.

Knowing where the toolbars are is a plus in Rhino. Also, remember that many buttons have both, a command for the **Left Click**, and a command for the **Right Click**. Keep your eyes open for these icons.

Tooltips tell what each button does. Move the pointer over a button without clicking it. A small yellow tab with the name of the command appears.

Notes:

Blue and red dots appears while you play your videos.

Whenever you see a **Red Solid Dot**, it means that a Left Click was made. Whenever you see a **Blue Solid Dot**, it means a Right Click was made. Remember that in Rhino, the left mouse button selects objects and picks locations. The right mouse button has several functions including panning and zooming, popping up context-sensitive menu, and acting the same way as pressing the **Enter** key.
